

Recycled Content

A carpet has more than 200 different substances. We are working hard to replace these with recycled materials. Our 2030 target is clear: 75% of raw materials must be recycled.

Some of the recycled materials we already use are: Regenerated polyamide yarn from fishing nets, felt from recycled plastic bottles, and polyester & polypropylene primary backings.

Moreover, some of our carpets contain renewable materials, such as wool yarn for our Highline 80/20 collection, and calcium used as filler in some backings.

The table below summarizes the recycled and renewable content for Highline 1100 ECT350

| Recycled Components | % |
|--|-----|
| Post Industrial / Pre Consumer | 18% |
| Post Consumer | 30% |
| Total Recycled Content (ISO 14021) | 48% |
| Total Recycled Content for LEED | 39% |
| Rapidly renewable material (<10 years) | 0% |
| Renewable material (>10 years) | 10% |
| Total renewable material | 10% |
